Hi Mark,

Did anyone else from EPA respond to your previous questions? I forwarded your email to EPA's Community Involvement Coordinator for the Dimock site, and was told she'd get back to you. Let me know. I'll forward these most recent questions as well. -- Terri

Hello Terry,

I have a couple more questions that I thought I'd send along to add to my previous...

-Is the total number of wells 57? That's what I came up with scrolling through the posted dataset. I thought I had seen 61 somewhere and wondered if some were not included.

-The trigger threshold of 28 mg/L for methane? I know very little about methane "thresholds," but have seen a lower number for mitigation (10 mg/L). Do you have any info on why 28?

Any information you can provide on any of these questions will be much appreciated. I'm preparing for a town meeting tonight and would like to be as informed as possible.

thanks much, **Ex. 6 - Personal Privacy**
